

Tissue	Universal peaks (>3x in ≥90% of samples)
brain (cerebellum)	~260
pancreas	~230
aorta	~210
adipose (subcut.)	~180
liver	~170
muscle	~170
adipose (visceral)	~170
kidney	~160
lung	~140
blood	~140
colon	~110

Tissue	log2 odds: biopsy-liver peaks universal in GTEx tissue
liver	~5.2
colon	~3.5
adipose (visceral)	~3.2
pancreas	~3.0
lung	~2.8
kidney	~2.7
aorta	~2.6
adipose (subcut.)	~2.6
muscle	~2.3
brain (cerebellum)	~1.8
blood	~1.8

Number of tissues in which a frequency is a universal peak	Frequencies
1	~400
2	~150
3	~80
4	~45
5	~25
6	~18
7	~13
8	~10
9	~1
10	~3
11	~2

A heatmap labeled 'a' showing the correlation (r) between consensus spectra of common genes across ten tissues. The tissues are listed on both the x-axis and y-axis: liver, kidney, pancreas, colon, lung, adipose (subcut.), adipose (visceral), aorta, muscle, brain (cerebellum), and blood. A color scale on the right indicates the value of r , ranging from 0.0 (dark purple) to 1.0 (yellow). The diagonal elements represent self-correlations where $r = 1.0$. Other values range from approximately 0.2 to 0.8.
